Rolling-Window Estimation: Five Representative Windows from the 45-Window Sample
Training window (10 years of historical data)
Prediction year (out-of-sample forecast)
Train 1970–1979, predict 1980
Train 1980–1989, predict 1990
Train 1990–1999, predict 2000
Train 2000–2009, predict 2010
Train 2010–2019, predict 2020
Each year, the model is retrained on the most recent 10 years and predicts the following year out-of-sample. This produces 45 rolling windows in total.
1960
1970
1980
1990
2000
2010
2020
2030
